Unlimited

#### Web Mail

You can read/send emails with WebMail web based email, similar service to Hotmail.

#### Mailing

##### Lists

Mailing Lists can be created on your account

#### Spam Assasin

Reduces the amount of spam emails arriving in your inbox.

## Site Features

### File Manager

You can upload files to your site from control panel. You can also create and delete folders or files. Ideal for editing your site from anywhere without an FTP client. You are not restricted to a dialup account.

### FTP Manager

Create/delete FTP accounts.

Unlimited

### Directory Protection

Restrict access to certain areas of web sites, configure as many usernames and passwords as required. Applications include sites where membership is required to view certain content.

### Cpanel Web-based site management

Manage all aspects of your hosting account via an easy to use online control panel which allows setup and configure email etc.

### Error Pages

You can create customized error pages, so when a user types in the wrong url, or enters the incorrect information, so you can have nice looking error pages instead of plain old ones:

400 Bad request, 401 Authorization Required, 403 Forbidden, 404 Wrong page, 500 Internal Server Error

### Sub-domains Administration

You can create and edit unlimited subdomains from your Control Panel subdomain manager. You may redirect subdomains internally or externally to other websites, ideal for keywords in search engines. examples :

me.yourdomain.com redirect > mysite.com/me.htm

pics.yourdomain.com redirect > othersite.com/pics.htm

Unlimited

## FrontPage Extensions

FrontPage 2000/2002 extensions are installed on our servers

## Scripts & Stats

## CGI Scripting

### Perl & C

Each account is equipped with its own CGI directory, allowing you to install and develop your own CGI scripts. We support cgi scripts written in Perl and precompiled C. Also included is a popular collection of pre-installed cgi scripts to add to your website. Can be installed from your control panel with one click.

### PHPNuke

A web portal and online community system which includes web-based administration, surveys, user customizable boxes, themes manager, friendly administration GUI, and multilanguage support. Uses PHP/MySQL. One click install on to your web space.

### Chat Room

Use a Java chat room on your website, involves adding a line of code into your webpage to activate chat room.

### Message Board

You can install a MySQL based Forum/BBS on your website. InvisionBoard is also available. One click install on to your web space.

### os Commerce

A free online shop program featuring order history, shopping carts, full search capability, product reviews, secure transactions, bestseller lists, and related items. One click install on to your web space.

### Web / FTP Statistics

You can view a variety of stats on your sites using the programs below:

**Analog** - Analog produces a simple summary of all the people who have visited your site. It is fast and provides great lightweight statistics

**Webalizer** - Webalizer is a more complex stats program which produces a nice variety of charts and graphs about who has visited your site. This is probably the most popular stats engine available today. You have two options available to you. You can view the logs from your Web Site or the logs from your Ftp Site (if you have one).

**Latest Visitors** - This will show you the last 300 visitors who came to your site, and some interesting information about them.

**Bandwidth** - This will show how many bytes of transfer your account has done, if this feature is enabled. Due to system limitations this number maybe lower then actual usage.

**Error Log** - This will show errors in your site, images not loading, missing files, etc. This is very useful for debugging a cgi script.

#### PHP5 Scripting

PHP is a powerful server side scripting language ideal for the creation of dynamic data driven web sites.

#### MySQL Database

mySQL is a powerful database engine designed to provide fast access to stored data. You can create unlimited number of Databases.

phpMyAdmin access is available through Control Panel

#### FANTASTICO

Fantastico allows you to Install more than 40 scripts with a single click and configuration of the scripts is seamless.

#### SSI

Server Side Includes enable the addition of dynamic elements to

HTML web pages. Automatically insert dates, file information and other HTML documents.

## Advanced Features

### Network Tools

Some handy network tools:

- Domain Name Lookup
- Trace Route

### Backup

Backup your website data to your computer from the control panel, restore backups from a single file.

### Cron Jobs

Schedule Cronjobs from a web interface accessible from your control panel to the crontab program. No need to contact us, run cronjobs whenever you like.

### Apache Handlers

Add apache handlers easily from the control panel

### Mime Types

Add Mime Types when you need them from your control panel.

### Shell Access Secure

Shell is a program to log into another computer over a network, to execute commands in a remote machine, and to move files from one machine to another. It provides strong authentication and secure communications over unsecure channels. Shell access is offered on only 2 shared servers right now and we will need to move your account to one of those servers if you need SSH access.
